

- Classmate Jade
- “Navigating the UI using text buttons feels unintuitive.”

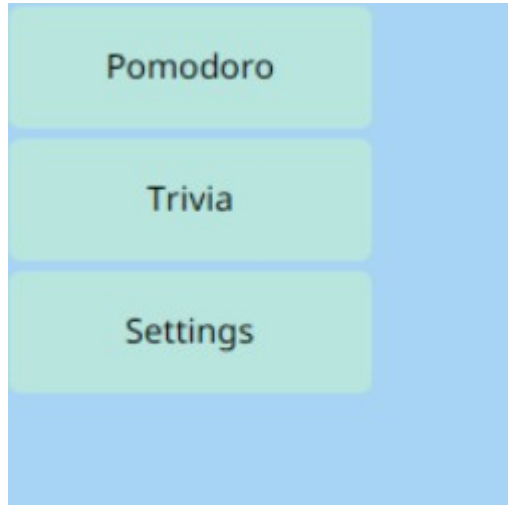

- Classmate Toby
- “Desktop pet needs more interactivity, with more speech bubbles.”

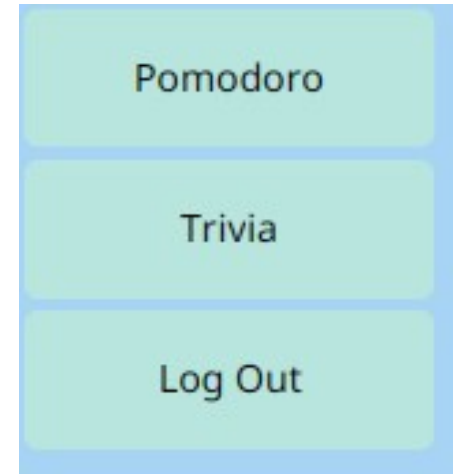

- Friend Makovin
- “Font needs to be more readable and supported by the background.”

- Friend Luke
- “Setting buttons is redudant.”

A 'User Login' window with a dark header bar containing the title 'User Login' and window control buttons. The main area has a light blue background. It features a dropdown menu titled 'Select your Username below:' with 'AI' selected and 'Human' as an option. To the right, there is a login form titled 'Enter your details here:' with fields for 'Username:' (containing 'AI') and 'Password:', followed by a 'Login' button.

- Tutor Nelli
- “A stronger emphasis on Agile practices is required.”

Item	Summary	From
Programming / Testing	Set up the concept framework in repository	Ethan
	Attempt github pull, Git pull origin framework	Nate
Troubleshooting	Nate's Java IDLE not working, cannot create a new JavaFX Project	
	Uninstall and reinstall JetBrains	Daniel, Ethan, Nate
	https://canvas.qut.edu.au/courses/23242/pages/integrated-development-environment-setup-5?module_item_id=2192493	
	How to co-ordinate GitHub pulls, branches, commits across team	Ethan, Nate
	Write documentation for GitHub and set up a branch plan	Ethan, Nate
Project set up / Research	Project set up - What type of AI-based Desktop Pets?	Nate
	State Machine implementation	Nate
	Happy sad angry emotion functionality	Ethan
	Open source codebase and Rest API	Nate
	What is the functionality? Start simple and with user stories	Ethan
	Monitoring study companion - hey have you had water? You've been staring at screen 1 hour? Don't neglect your health	Ethan
	Anti vs Pro AI position? How does the project relate to the AI idea	Daniel
	A general commentary on AI and human interactions, start simple and avoid the satire idea for now	Ethan
	Output Trivias responses, customise Trivia subject matter	Ethan, Jacob
	Secret hidden game code - AI realises its alive!!!! Advanced feature, Konami Code	Daniel, Ethan, Jacob
	Pomodoro Timer- easy to implement, basic functionality	Daniel
Scrum	How to organise your individual worklog - the workflow	Daniel, Ethan, Jacob
	Catching everyone up with Troubleshooting session and Branch plan	Ethan
Research	JavaSwing into JavaFX, research into JavaSwing may be easier only 120 lines of code	Nick
	Hijack Rest API Vtube studio, open-source Electron desktop pets, Javascript Open Source Mascot Assets Line	Nate
	Desktop functionality ideas: dialogue system, physics, rewards affection system. Probably don't use multiple characters, just one characters.	Nate
Activity 1 Scrum Meetings	Daniel Scrum Master	Daniel
	1) Excel sheets 2) Researching Shimeji + Pomodoro functionality + More Excel sheets) Still learning JavaScript	Daniel
1) Done last week	1) Project Brief 2) User Stories + Low fidelity prototype 3) Still learning JavaScript	Jacob
2) To do this week	1) Set up Github repository + Discord server + Java HTML application menus 2) GitHub navigation document 3) IntelliJ IDLE issues	Ethan
3) Road blocks	1) Java Readiness + Research existing Companions apps + Troubleshooting IDLE 2) Further research Companion apps + animation state machines in Java e.g. Reaction system that selects actions that you can interrupt 3) IntelliJ IDLE issues	Nate
	1) Went through Assignment briefing and made a low fidelity demo for Desktop pet 2) Continue improving demo, implementing animation, AI 3) Debugging	Nick
	1) Java Readiness (Late addition to the group Sixth member) 2) Catching up on Content and Java knowledge + Nate's research assistant 3) Being a late addition Sixth group member	Mak
Project set up	Are we allowed to use JavaSwing???	Nate
	JavaFx can't do window click through	Nate
	Do we want it to go anywhere on the screen or a select field	Ethan
	Scale the transparent window	Nate
	Split Desktop pet functionality into must haves vs nice to haves -> User StoriesTab	Ethan
	Pre-existing Codebases allowed	
	Nick ask about JavaSwing Gui. Email pending for Unit Coordinator. JavaSwing has functionality where you can click windows and it won't break	
	Each member responsible for Branch. Keep pushing to main to make sure code is Compatible.	

Item	Summary	From
Activity 1 Scrum Meetings	Scrum Master Daniel	Daniel
1) Done last week	1) Researched Pomodoro 2) User Stories + Implement basic Pomodoro functionality + Release Plan 3) Still learning Javascript	Daniel
2) To do this week	1) Research design and rig-testing models 2) Implement the animation model (PNG method?) 3) No roadblocks currently	Nate
3) Road blocks	1) GitHub documentation and Mock Trivia branch code 2) SQL Storage for Trivia 3) Working Github [solved]	Ethan
	1) User stories 2) Research state changes for animation 3) Working Github [solved]	Jacob
	1) Currently sick. Working on App Baseline Functionality. 2) Finish prototype Baseline Functionality and commit to Git. 3) Getting better :)	Nick

Must / Should haves

- Various IT Professional associate(s)
- “Test Singleton code patterns by testing an instance instead of the static accessor”

```
public class UserAuthenticationTest { @ daniel
    private static MockAuthController mockAuthController; 3 usages
    private static UserDao mockUserDAO; 7 usages

    @BeforeAll @ daniel
    public static void setUp() throws Exception {
        mockAuthController = new MockAuthController();
        mockUserDAO = new UserDao();
        mockUserDAO.dropTable();
        mockUserDAO.createTable();
        mockUserDAO.insert(new User( user_id: 16, username: "", password: "", salt: null, registered: false));
    }

    @AfterAll @ daniel
    public static void closeConnection() { mockUserDAO.close(); }

    @Test @ daniel
    public void testAuthentication() throws Exception {
        byte[] salt = mockAuthController.generateSalt();
        String username = "testUsername";
        String password = mockAuthController.hashPassword( password: "testPassword", salt);
        User mockUser = mockUserDAO.getById( user_id: 1);

        mockUser.setUsername(username);
        mockUser.setPassword(password);
        mockUser.setSalt(salt);
        mockUser.setRegistered(true);

        mockUserDAO.update(mockUser);

        assertEquals( expected: "testUsername", mockUser.getUsername());

        assertEquals( unexpected: "testpassword", mockUser.getPassword());
        assertEquals(password, mockUser.getPassword());

        assertEquals(AuthController.generateSalt(), mockUser.getSalt());
        assertEquals(salt, mockUser.getSalt());

        assertEquals( expected: true, mockUser.getRegistered());
    }
}
```

```
package project.authentication;

public class MockAuthController extends AuthController { @ daniel
    /**
     * Mock AuthController that doesn't instantiate a login screen and private fields
     */
    public MockAuthController() throws Exception { @ daniel
    }

    @Override no usages @ daniel
    public void initialize() {
    }
}
```

- Teammate(s)
- Nathaniel “Some methods are set to public unnecessarily.”
- Daniel “Trivia / Pomodoro stages won’t close after logging out”

```
triviaStage.initOwner(primaryStage); //Inheritance
```

- Ethan “Refactor databases with foreign key.”

Sprint Plan Retrospective

- Future considerations
 - Better team communication to identify deliverables
- Lessons learned
 - More consistent use of Agile throughout project
- Achievements
 - Functional prototype that met Must-have User stories
- Problems
 - Still communicating on AI integration approach
